IN THE CLAIMS:

1. (Presently Amended) A firearm support system comprising:

an extendable arm having at least one end;

a support element attached to the at least one end of the extendable arm and having a plurality of rest members spaced from one another along at least a portion of the support element; and

a support attachment member to engage a fixed structure and configured to accept at least a portion of the extendable arm.

- 2. (Presently Amended) The firearm support system of claim 1, wherein the firearm support system pivots relative to the fixed structure.
- 3. (Presently Amended) The firearm support system of claim 2 claim 1, wherein the support element is flexible.
- 4. (Presently Amended) The firearm support system of elaim 2 claim 1, wherein the extendable arm is telescopic.
- 5. (Presently Amended) The firearm support system of elaim 2 claim 1, wherein the extendable arm comprises a plurality of rotatably connected arm segments.

- 6. Cancelled.
- 7. (Presently Amended) The firearm support system of elaim 2 claim 1, wherein the plurality of rest members are attached to at least one flexible elongated fibrous element.
- 8. (Presently Amended) The firearm support system of elaim 2 claim 1, wherein at least one of the rest members has a closeable opening to store a plurality of securing elements.
- 9. (Presently Amended) The firearm support system of elaim 2 claim 8, wherein the securing elements are screws.
- 10. (Presently Amended) The firearm support system of elaim 2 claim 1, further comprising a screw driver head fixedly attached to a portion of the extendable arm.
- 11. (Presently Amended) The firearm support system of <u>claim 2 claim 1</u>, wherein the at least a portion of the extendible arm has a projection and the support attachment member is configured to receive the projection in a pivotable manner.
- 12. (Presently Amended) A firearm support system comprising:

 an extendable arm, the extendable arm having a first end configured to engage a support structure; and

a support element <u>secured</u> attached to a second end of the extendable arm, the <u>support</u> element having a plurality of rest members.

- 13. (Original) The firearm support system of claim 12, wherein the first end is a rounded portion with threads to engage the support structure.
- 14. (Original) The firearm support system of claim 12, wherein the first end has a projection to engage a holder that is attached to the support structure.
- 15. (Presently Amended) The firearm support system of elaim 12 claim 14, further comprising an attachment member to engage a fixed structure and configured to accept the projection on the first end of the extendable arm.
- 16. (Original) The firearm support system of claim 1, wherein the support structure is a tree.
- 17. (Original) The firearm support system of claim 1, wherein the support structure is a tree stand.
- 18. (Presently Amended) A firearm support system comprising:

an arm configured to be attached to a support structure and to extend in a generally horizontal direction away from the support structure; and

a support element attached to <u>an end</u> of the arm, the support element having a plurality of rest members spaced from one other along the support element to support a firearm.

19. (New) A firearm support system consisting of:

an arm configured to be pivotally attached to a support structure and to extend in a generally horizontal direction away from the structure; and

a support element fixed to one end of the arm, the support element having a plurality of rest members spaced from one other along at least a portion of the support element.
